

Research Associate I

Research Associate (Exempt)

Reports to Application Scientist

Job Responsibilities:

- Plan experiments with guidance from supervisor
- Perform complex and critical laboratory experiments (primarily ELISA) with accuracy and precision
- Analyze experiment results and recommend potential follow-on experiments
- Follow all established company processes and procedures
- Prepare buffers and other chemical solutions as needed
- Other duties and responsibilities as assigned

Ideal candidate will have:

- BS or BA in biology, biochemistry or related field and a minimum of one to three (1 - 3) years lab experience running ELISA assays, preferably in a contract lab
- Excellent pipetting technique, including use of multi-channel pipettes
- Experience with assay development and optimization
- Strong written and verbal communications skills and a customer-centric approach, whether they be internal or external customers
- The ability to work in a fast-paced, collaborative and team-oriented environment
- Skill in using Microsoft Excel and/or Softmax Pro to analyze data, generate graphs and tables to communicate results
